

1) First we start by creating a trello board-

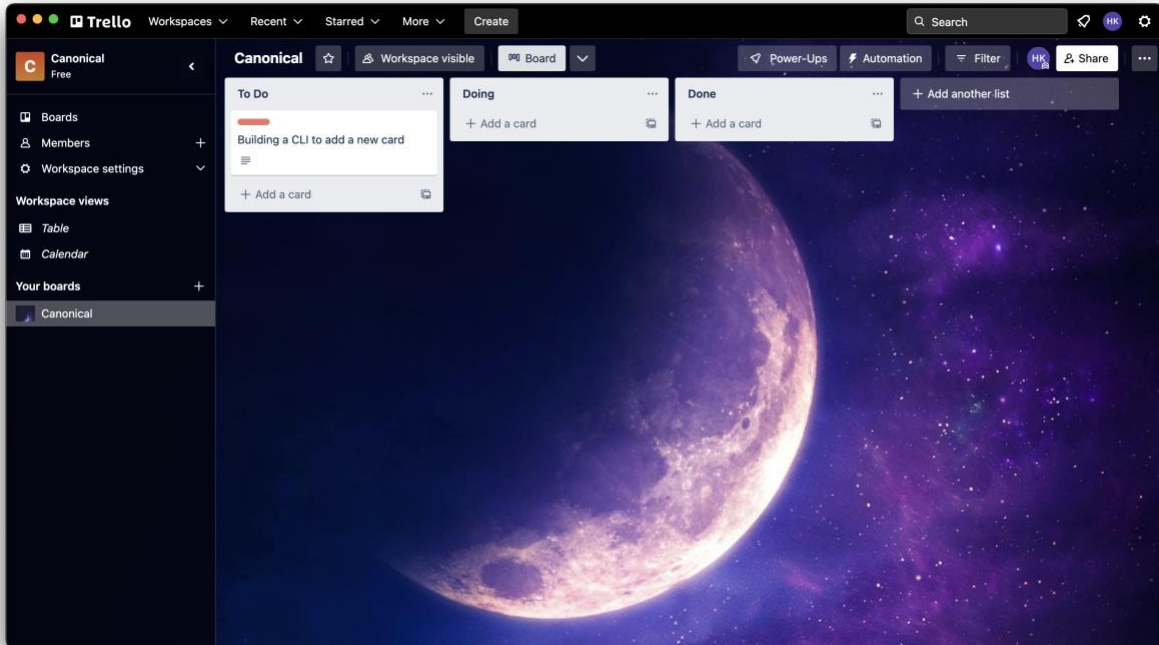

The board id of the following board is **6wsNCPw7**

Now we run add_trello_card.py with following arguments in command line-

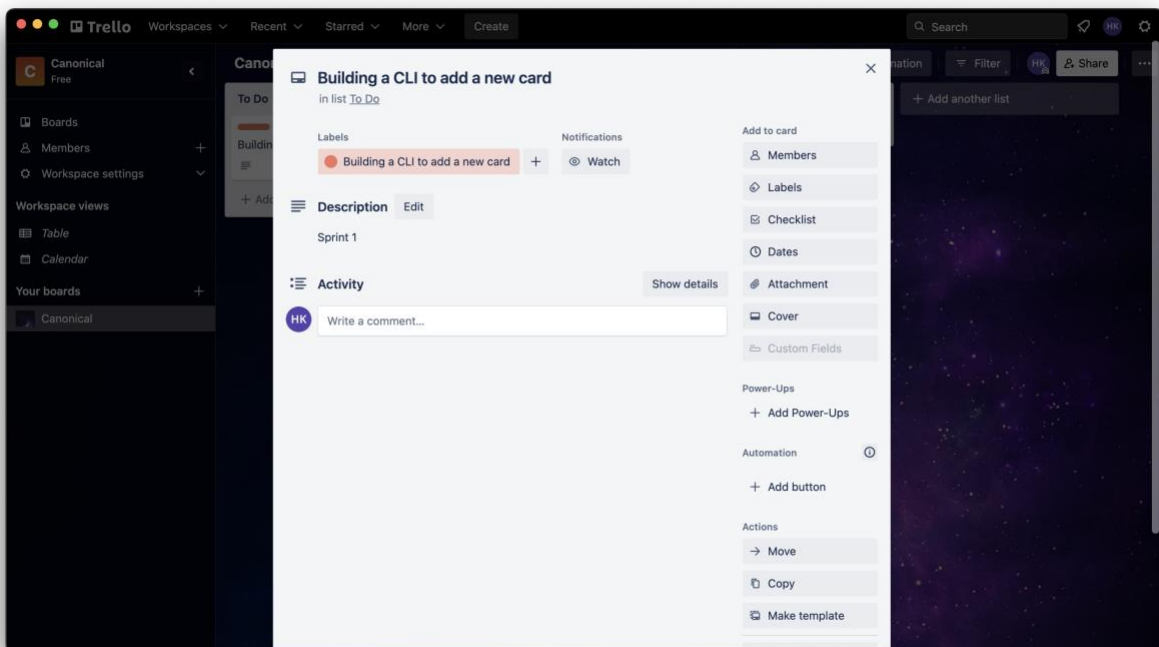

```
python3 add_trello_card.py 6wsNCPw7 "To Do" "Building a CLI to add a new card" -c "Sprint 1" -l "red"
```

```
Canonical — -zsh — 80x24
Last login: Sat Apr 1 23:22:27 on ttys008
(base) harshilkhara@Harshils-Air Canonical % python3 add_trello_card.py 6wsNCPw7
      "To Do" "Building a CLI to add a new card" -c "Sprint 1" -l "red"
Card created: https://trello.com/c/3HALW2TE/4-building-a-cli-to-add-a-new-card
(base) harshilkhara@Harshils-Air Canonical %
```

Output- We can see that a new card “Building a CLI to add a new card” has been created with a red label and a comment “Sprint 1” under the specified column “To Do”.

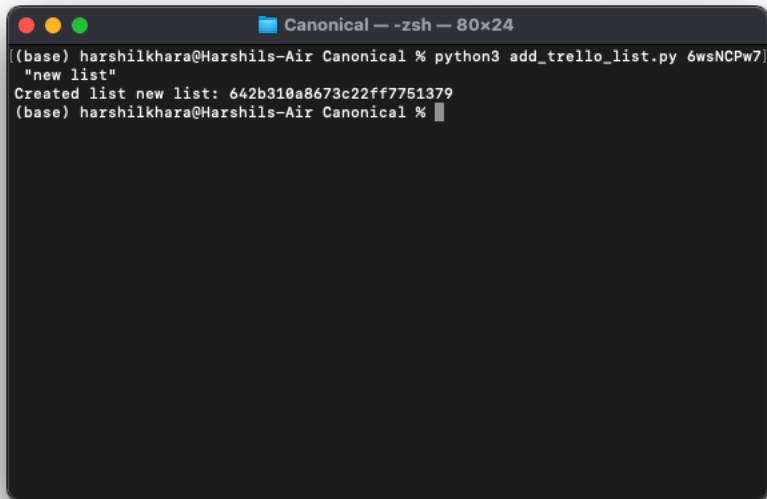

You can also see the comment and label passed here-

2) We can also create a new list in the above board:

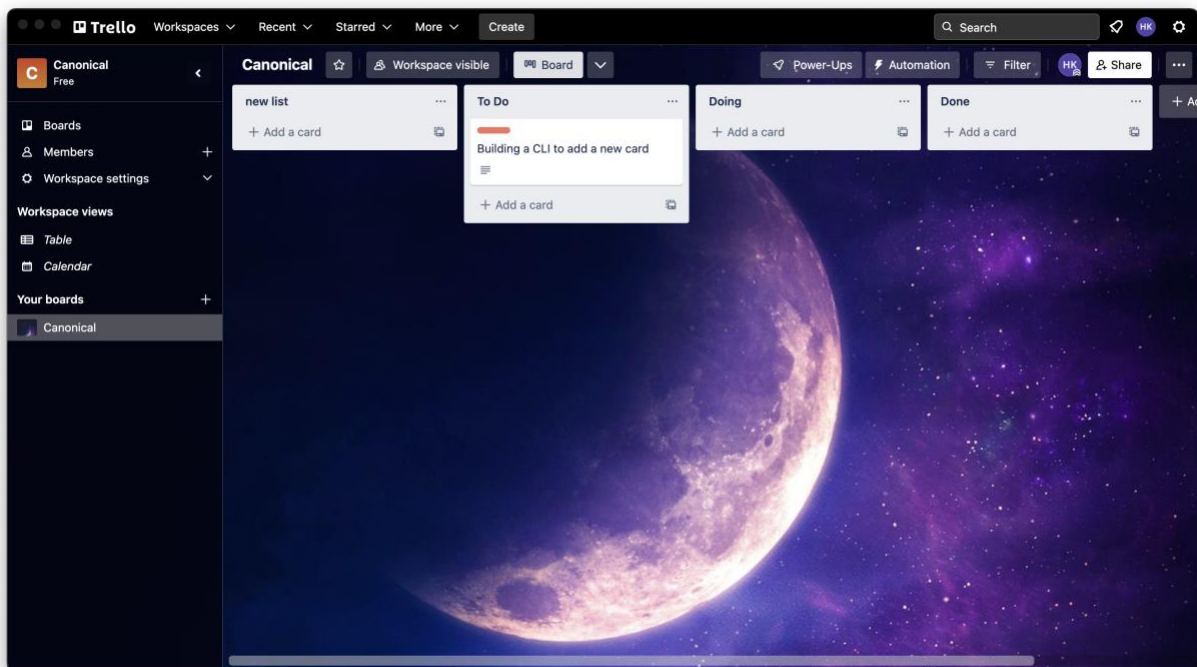

Now we run add_trello_list.py with following arguments in command line-

python3 add_trello_list.py 6wsNCPw7 "new list"

```
Canonical — zsh — 80x24
(base) harshilkhara@Harshils-Air Canonical % python3 add_trello_list.py 6wsNCPw7
"new list"
Created list new list: 642b310a8673c22ff7751379
(base) harshilkhara@Harshils-Air Canonical %
```

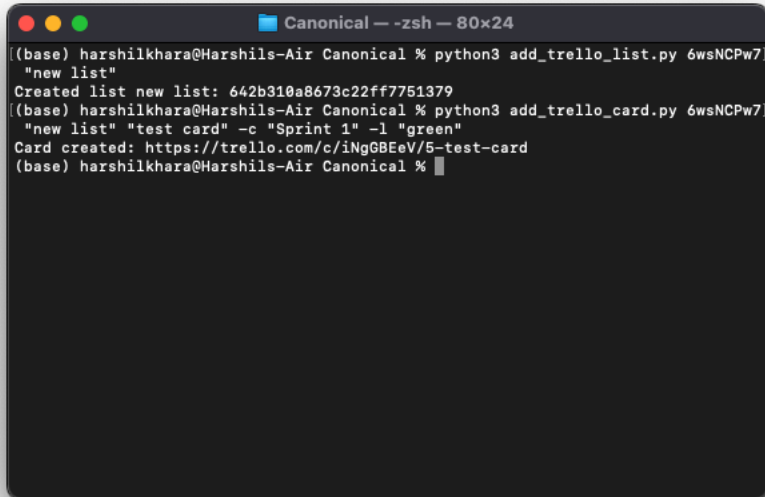

Output- We can see that a new list in the board has been created.

3) Now lets a card to newly added list-

Now we run add_trello_card.py with following arguments in command line-

`python3 add_trello_card.py 6wsNCPw7 "new list" "test card" -c "Sprint 1" -l "green"`

```
Canonical — zsh — 80x24
(base) harshilkhara@Harshils-Air Canonical % python3 add_trello_list.py 6wsNCPw7
"new list"
Created list new list: 642b310a8673c22ff7751379
(base) harshilkhara@Harshils-Air Canonical % python3 add_trello_card.py 6wsNCPw7
"new list" "test card" -c "Sprint 1" -l "green"
Card created: https://trello.com/c/iNgGBEeV/5-test-card
(base) harshilkhara@Harshils-Air Canonical %
```

Output- We can see that a new card “test card” with green label has been created under the column “new list”.
